## 1. Current Twixt-playing programs

- See [this page](#) for some information about my first program, called "T1" (no longer developed).
- See [this page](#) for some information about my second program, called "T1j". The internal structure of this program is explained [here](#).
- The Twixt-playing program, which was formerly hosted at [www.twixt.de](http://www.twixt.de), can now be found [here](#). It looks nice, but it does not play strong. (German language.)
- The player '[TwixtBot](#)' at [Little Golem](#) is a program which can be challenged. Plays quite good.
- [This page](#) about Twixt-programming is worth reading.
- Please give me a note if you have any information about other Twixt-Programs. Thanks.
